

EEF Meeting Minutes, Thursday March 3, 2022

Erlang Ecosystem Foundation, Minutes of a Regular Meeting of the Board of Directors Meeting #62, March 3, 2022

A regular meeting of the Erlang Ecosystem Foundation was held over group conference call (Zoom). The meeting began at 16:08 UTC.

Attendance

The following members of the board of directors were present (8/11): Richard Carlsson (left at :44 before item 7), Francesco Cesarini, Sophie DeBenedetto, Kenneth Lundin, Miriam Pena Villanueva (joined in time for item 4), Sebastian Strollo, Frédéric Trottier-Hébert (left at :59, before item 7.3), and Alistair Woodman.

The following members of the board of directors were absent: Maxim Fedorov, Peer Stritzinger, and Bryan Paxton.

Agenda Items

1. Approval of minutes from previous meetings.

RESOLVED, that the Erlang Ecosystem Foundation approve the minutes as presented as representing a true and accurate record of the board meeting #61 held on February 3, 2022. Unanimously approved.

2. Treasury and Membership update: New sponsors: EMQX and HCA Healthcare.
3. Unanimous Consent votes: none scheduled
4. Board elections update: no candidates have stepped forward yet, we have reached out to current members.
5. Goggle Summer of Code: status update, Pablo Costas in the Education working group has expressed interest. Work to apply ongoing.
6. CI Proposal, lead by Maxim and the Infrastructure Working Group (to be handed over to the Build and Packaging group when implemented). The board walked through the CI project proposal, it consists of two parts: continuous build and test of community pull requests, and building binary packages for multiple OS's and architectures. In general the project has the full support of the board, but no vote

taken this meeting. Noted that the budget does not include items to implement and maintain the code.

7. Any other business:

1. Stipend Request from Mohammad Maqbool, requested support for traveling to the “Big Elixir” conference, where he will present. After a brief discussion approved by unanimous consent.

RESOLVED, that the Erlang Ecosystem Foundation approve the request from Mr Maqbool for a travel stipend at approximately \$1300. Unanimously approved by the 7 out of 7 board members present.

2. Development Support for OpenID implementation from Jonatan Männchen: everyone thought that this is a worthwhile project for the foundation to sponsor, but at the proposed price tag of \$26,900 it would be the most expensive project to date and EEF have not so far taken on a project that size all by itself. The board is not ready to accept it as it stands, and the proposal goes back to the working group to work on the amount requested (perhaps the employer of some of the suggested implementors would be willing to take some of the cost).
3. Stipend Request to support “A new version solver for the Hex client” requested by Eric Meadows-Jönsson.

RESOLVED, that the Erlang Ecosystem Foundation approve the request from Eric Meadows-Jönsson to support the development of a new version solver for the Hex Client. Unanimously approved by the 6 out of 6 board members present.

8. Alistair declared the meeting adjourned at 17:02 UTC.

Dated March 3, 2022

Secretary of the meeting: _____ Sebastian Strollo

Stipend Proposal

Stipend Type : Other

First name : Mohammad Maqbool

Last Name : Alam

Nick Name : Maqbool

Email Address : alammohdmaqbool@gmail.com

Country : India

Bio :

Maqbool is an Elixir Developer from New Delhi, India, and he tries to build/help build a local beam-based community in his home city and try to promote BEAM-based tech to the local developer community. <https://t.me/elixirdelhi> (our local elixir usergroup telegram channel)

Purpose

Hello EEF, I proposed a talk at the BEAM-based conference called the Big Elixir conference 2022 and my talk got accepted but the conference can't afford stipends for the travel. I am quite early in my career as an Elixir developer so I can't afford the travel cost on my own so I applying for this application to EEF to sponsor only my travel/flight cost and I can take care of everything including visa, and place to stay. On the website of flight ticket, it says the cost of a flight ticket is between 1300 to 1400 USD from New Delhi(DEL) to New Orleans USA (MSY) I have been an active member / Organizer of a local elixir/erlang user group in New Delhi, India to promote BEAM based technologies among local developer groups. You can learn more about the conference on this website. thebigelixir.com The Conference is at 24-March-2022 Please let me know if you have any question via alammohdamqbool@gmail.com Maqbool

Report : Yes. I would love to write a report informing EEF in the form of a blogpost on my website about what I learned from the conference and How was the conference and all.

Stipend Amount (USD) : 1300

Beneficiaries : I am the primary beneficiary of this stipend and from what I can tell new Orleans has quite an active elixir community and this conference is the primary conference that happens yearly before COVID.

Stipend Proposal

Stipend Type : Development Work

First name : Jonatan

Last Name : Männchen

Nick Name : maennchen

Organization Name : JOSHMARTIN GmbH

Country : Switzerland

Twitter : maennchen_

Linkedin : <https://linkedin.com/in/maennchen>

Website : <https://maennchen.dev/>

Intended product of project :

Please have a look at the fully formatted & complete version of this proposal under the following link or as a PDF in the attachments: https://docs.google.com/document/d/1NtFv13VRDP1gOHGeMsQVP49DK_b7R3PtSKT2lhv5nE8/edit# # Overview This project will build on top of the existing oidcc library. I've recently taken over maintenance from indigo-dc which was unfortunately unable to further maintain the library. The goal is to clean up, refactor and update the library to conform with all the latest specifications. The code is currently largely untested and its conformance certification no longer works.

Subprojects ## oidcc - Erlang This is the main library. It contains modules with basic data structures and functions to handle all actions/validations. It will also contain a gen_server to keep an up-to-date OpenID introspection as well as keys in memory. ## oidcc_plug - Elixir Contains helpers to integrate both APIs (Token in Authorization Header) as well as session based interaction into plug. ## oidcc_cowboy - Erlang Contains helpers to integrate both APIs (Token in Authorization Header) as well as session based interaction into cowboy. ## phx_gen_oidcc - Elixir Contains Phoenix Generator to set up a Phoenix application with OIDC.

Purpose

OpenID Connect 1.0 is a simple identity layer on top of the OAuth 2.0 protocol. It allows Clients to verify the identity of the End-User based on the authentication performed by an Authorization Server, as well as to obtain basic profile information about the End-User in an interoperable and REST-like manner. [<https://openid.net/connect/>] OpenID allows to delegate authentication and authorization to an OpenID server. Examples for providers / projects offering OpenID are: Google, Yahoo, Apple, Azure Active Directory, Auth0, Okta, Keycloak, Zitadel and many more. Having a set of contemporary, secure

and well maintained components implementing the OpenID Connect standard for the Erlang/Elixir ecosystem makes a lot of sense since OpenID Connect has become the de facto standard for Single Sign On / Delegated Authentication in the industry.

Development Plan

* Setup CI - oidcc - W1 - W1 - 2 days * Cleanup and Refactor current modules - W1 - W2 - 4 days * Replace erljwt with jose - W3 - W3 - 1 day * Implement telemetry instrumentation - W3 - W3 - 1 day * Certify Library - W4 - W4 - 3 days * Write Documentation - W5 - W5 - 2 days * Implement Cowboy Integration - W7 - W7 - 2 days * Implement Plug Integration - W7 - W7 - 2 days * Implement phx_gen_oidcc - W8 - W8 - 3 days * Publication - W9 - W9 - 1 day * Conference Talk - 2 days * 1st Year Maintenance / Hardening - 4 days

Dissemination : A talk will be prepared to be able to introduce the library to all interested developers on the BEAM. The talk will be held at at least one BEAM related conference. An effort will be made to integrate phx_gen_oidc directly with phoenix similar to phx_gen_auth.

Delivery Method : The libraries will be published on GitHub in its own organization. (licensed under the Apache 2.0 License, same as OTP and most dependencies) A stable release will be published on Hex.pm.

Stipend Amount (USD) : 26900

Stipend Proposal

Stipend Type : Development Work

First name : Eric

Last Name : Meadows-Jönsson

Country : Sweden

Website : <https://hex.pm>

Intended product of project :

A new version solver for the Hex client. The version solver decides what packages and versions to download in your project. I am developing a new version solver for Hex based on the PubGrub solver algorithm. The PubGrub algorithm is described in its [introductory blog post](<https://nex3.medium.com/pubgrub-2fb6470504f>), has been proven to work in Dart's package manager [pub](<https://github.com/dart-lang/pub>) that we are using as reference and has implementations in other languages such as [Rust](<https://github.com/pubgrub-rs/pubgrub>).

Purpose

The existing solver was created in 2013/2014 and has been incrementally improved since then but we have reached the limits of what we can improve without a full rewrite. The current solver has issues with slow resolution that can be so slow that it appears to never finish. The PubGrub algorithm will vastly improve the worst case solve time and will give other improvements such as better error messages when solutions could not be found.

Development Plan

The majority of the work has already been done implementing the new solver in a [separate library](https://github.com/hexpm/hex_solver). This stipend is for the work Eric Meadows-Jönsson will do integrating the solver in the [Hex client](<https://github.com/hexpm/hex>). The development will be split into two phases: 1. Implementation. 40 hours. Integration of the new library in Hex. The library is written in a generic way that is not specific to Hex and doesn't know about things such as repositories, OTP applications, and lock files so the input and output data needs to be worked to fit each other. 2. Community support. 40 hours. Solvers are hard to test because issues happen in the wild and it's impossible to test every input case. They can also be disruptive to developers workflow if they don't work correctly. We will have a long testing period before we can trust the new solver to be released.

Dissemination : A blog post will be made on <https://hex.pm/blog> like for all major Hex releases. Further personal blog posts or talks may be made about the details of the new solver but nothing is currently planned.

Delivery Method : The new solver will be included in the Hex 2.0 release. The new release is only waiting for the new solver to be ready.

Stipend Amount (USD) : 4000
