

EEF Meeting Minutes, Thursday March 31, 2022

Erlang Ecosystem Foundation, Minutes of a Regular Meeting of the Board of Directors Meeting #64, March 31, 2022

A regular meeting of the Erlang Ecosystem Foundation was held over group conference call (Zoom). The meeting began at 16:01 UTC.

Attendance

The following members of the board of directors were present (9/11): Richard Carlsson, Francesco Cesarini (on a bad mobile connection), Maxim Fedorov, Kenneth Lundin, Bryan Paxton, Villanueva, Peer Stritzinger, Sebastian Strollo, Frédéric Trottier-Hébert, and Alistair Woodman.

The following members of the board of directors were absent: Sophie DeBenedetto, Miriam Pena.

Incoming board member Ben Marx was also present.

Agenda Items

1. Approval of minutes from previous meetings.

RESOLVED, that the Erlang Ecosystem Foundation approve the minutes as presented as representing a true and accurate record of the board meeting #62 held on March 3, 2022. Unanimously approved.

RESOLVED, that the Erlang Ecosystem Foundation approve the minutes as presented as representing a true and accurate record of the board meeting #63 held on March 17, 2022. Unanimously approved.

2. Intermediate actions: none
3. Membership update: noticeable uptick since last meeting, thanks to Francesco for plugging EEF at CodeBEAM Lite India. Membership numbers: Basic: 930, Annual Supporting: 142, Lifetime Supporting: 17, Managing and Contributing: 19, Board: 7
4. Board elections. A big thank you to Fred and Peer for running the board elections. Peer presented the results:

1. The election had 182 eligible voters, out of them 77 cast a vote (a turnout of 42.3%). Results: Maxim Fedorov 63 votes, Kenneth Lundin 55 votes, Ben Marx 49 votes, and Svilen Gospodinov 32 votes. Which means that the new cohort A consists of: Maxim Fedorov, Kenneth Lundin, and Ben Marx.

RESOLVED, that the Erlang Ecosystem Foundation approve the results of the board election and formally install cohort A as including Maxim Fedorov, Kenneth Lundin, and Ben Marx. Unanimously approved.

2. The board would like to thank Richard Carlsson for his service on the board since the founding of the foundation.
3. The board also extends a warm welcome to Ben Marx.
5. Unanimous consent votes: none scheduled.
6. Stipend requests, presented by Bryan:
 1. Adolfo Neto, supporting the podcast Foco (portugese language podcast for the Elixir/BEAM community) through a one-year subscription to SquadCast Pro at \$550.

RESOLVED, that the Erlang Ecosystem Foundation approve the request for \$550 to support Adolfo Neto and the podcast Foco. Unanimously approved.

2. Jonathan Männchen, Development Work. To support the development of an OpenID Connect Client (including membership of EEF to the OpenID foundation and certification cost). Total of \$26900 + \$500/year.

RESOLVED, that the Erlang Ecosystem Foundation declines the request to support the development of an OpenID Connect Client at this time. Unanimously declined.

3. Pascal Knoth, Development Work. Support the work to implement an OAuth / OpenID Connect provider in Elixir. The proposal has not come through any working groups, the board suggests that Pascal joins the security working group and develops the proposal there.

RESOLVED, that the Erlang Ecosystem Foundation declines the request to support the development of an OAuth/OpenID Connect provider at this time. Unanimously declined.

7. Accounting update: Sebastian is considering upgrading our QuickBooks subscriptions and buy a one time service of improving our chart of accounts setup. Will return with a formal proposal after some more research.
8. Any other business: none.
9. Alistair declared the meeting adjourned at 16:43 UTC.

Dated March 31, 2022

Secretary of the meeting: _____ Sebastian Strollo

Bio :

I am an Associate Professor at the Federal University of Technology, Paraná since 2008. I am also a co-host of Elixir em Foco, a podcast in Portuguese for the Portuguese-speaking Elixir/BEAM community. Links to the podcast: Spotify: <https://open.spotify.com/show/43aDX4kajkNCKaCYpGPooJ> Site of the podcast is <https://elixiremfocus.com/>. Anchor: <https://anchor.fm/elixiremfocus> YouTube: https://www.youtube.com/channel/UCpdEIWp_U2YyXLCJYTDiG7g/ Twitter: <https://twitter.com/elixiremfocus>

Purpose

The purpose of the stipend is to pay for an year of SquadCast Pro Audio subscription . The funds can be received by the end of March 2022. In the PDF attachment you can see detailed data about our current audience. Each regular monthly episode is listened by 200 or more people after one month. We need a service such as SquadCast because we want to record with separate audio tracks. This is important for our editor, which is paid by another sponsor: Stone. The Elixir em Foco team is Adolfo Neto, Cristine Guadalupe, Herminio Torres and Matheus Pessanha. We usually interview one or two people. That's why we need a plan that allows at least 6 people in the recording. This stipend is designed to help grow the community by allowing more people to listen to our podcast episodes. We have started with free alternatives (Discord, Zencast free plan) and have had some problems in our recordings. We believe that with better audio more people will listen to our episodes. How many more? I don't know. The goal is to at least double our audience to 400 listeners per episode in 2022.

Code of Conduct link :

Report : I will include in the report all data about our audience after one year of using the funding; the audience data available for us is in the attachment. I will also include the names of all interviewees, a brief description of each episode and links to the episodes. As follow up activities, we plan to include in our site (<https://elixiremfocus.com/>)

and we will will also say in our episodes that Erlang Ecosystem Foundation is sponsoring. We will also invite people to join EEF.

Stipend Amount (USD) : 550.00

Beneficiaries : The beneficiaries of the stipend will be our future new listeners, who will have access to episodes recorded with better sound quality. We hope to attract at least 200 new listeners with better quality recordings.

Intended product of project :

Please have a look at the fully formatted & complete version of this proposal under the following link or as a PDF in the attachments: https://docs.google.com/document/d/1NtFv13VRDP1gOHGeMsQVP49DK_b7R3PtSKT2lhv5nE8/edit# # Overview This project will build on top of the existing oidcc library. I've recently taken over maintenance from indigo-dc which was unfortunately unable to further maintain the library. The goal is to clean up, refactor and update the library to conform with all the latest specifications. The code is currently largely untested and its conformance certification no longer works.

Subprojects ## oidcc - Erlang This is the main library. It contains modules with basic data structures and functions to handle all actions/validations. It will also contain a gen_server to keep an up-to-date OpenID introspection as well as keys in memory. ## oidcc_plug - Elixir Contains helpers to integrate both APIs (Token in Authorization Header) as well as session based interaction into plug. ## oidcc_cowboy - Erlang Contains helpers to integrate both APIs (Token in Authorization Header) as well as session based interaction into cowboy. ## phx_gen_oidcc - Elixir Contains Phoenix Generator to set up a Phoenix application with OIDC.

Purpose

OpenID Connect 1.0 is a simple identity layer on top of the OAuth 2.0 protocol. It allows Clients to verify the identity of the End-User based on the authentication performed by an Authorization Server, as well as to obtain basic profile information about the End-User in an interoperable and REST-like manner. [<https://openid.net/connect/>] OpenID allows to delegate authentication and authorization to an OpenID server. Examples for providers / projects offering OpenID are: Google, Yahoo, Apple, Azure Active Directory, Auth0, Okta, Keycloak, Zitadel and many more. Having a set of contemporary, secure and well maintained components implementing the OpenID Connect standard for the Erlang/Elixir ecosystem makes a lot of sense since OpenID Connect has become the de facto standard for Single Sign On / Delegated Authentication in the industry.

Development Plan

* Setup CI - oidcc - W1 - W1 - 2 days * Cleanup and Refactor current modules - W1 - W2 - 4 days * Replace erljwt with jose - W3 - W3 - 1 day * Implement telemetry instrumentation - W3 - W3 - 1 day * Certify Library - W4 - W4 - 3 days * Write Documentation - W5 - W5 - 2 days * Implement Cowboy Integration - W7 - W7 - 2 days * Implement Plug Integration - W7 - W7 - 2 days * Implement phx_gen_oidcc - W8 - W8 - 3 days * Publication - W9 - W9 - 1 day * Conference Talk - 2 days * 1st Year Maintenance / Hardening - 4 days

Dissemination : A talk will be prepared to be able to introduce the library to all interested developers on the BEAM. The talk will be held at at least one BEAM related conference. An effort will be made to integrate phx_gen_oidc directly with phoenix similar to phx_gen_auth.

Delivery Method : The libraries will be published on GitHub in its own organization. (licensed under the Apache 2.0 License, same as OTP and most dependencies) A stable release will be published on Hex.pm.

Stipend Amount (USD) : 26900

Stipend Type : Development Work

Website : <https://hexdocs.pm/boruta/2.0.0/readme.html>

Intended product of project :

It's been a while I am working on an implementation of an OAuth / OpenID Connect provider in Elixir. It was first intended for me to learn the language in which I like the functional paradigm and all the approaches and tooling brought by the BEAM and OTP. At last, the product is to bring an IAM solution to organizations targetting to make Self Sovereign Identity principles more accessible to them.

Purpose

In the identity field, standards exist and need to be strengthened and more accessible (with a better Developer eXperience) as a developer and bring more privacy and control for the end-users. With Open source principles at the heart of the product, these would help to bring organizations better security for their HTTP services at a lower cost.

Development Plan

I open-sourced the authorization business rules as a package <https://hex.pm/packages/boruta>. This helps to provide OAuth and OpenID Connect to existing Erlang/Elixir applications. To go further, I am these days working on an administration panel and an identity provider in order to have a minimal standalone IAM solution. This step completed, I would first work on the maintenance and evolution of the product with the help of the community and further work on Self Sovereign Identity, a field where I have little knowledge but where I want to deep dive.

Dissemination : I am already a member of Erlang/Elixir, OWASP, and privacy engineering meetups of Paris, I have already made some presentations and want to go on this way to have a small circle of fellowship. ElixirForum is a good place for announcements about Elixir packages, I have a thread there about the core, it would be the first place for updates. With confidence acquired on the field, I would go for a showcase website, maybe blog posts, and further presentations.

Delivery Method : The product core is already published as a hex package. I would maintain it, hoping it would help more and more developers who want to bring OAuth /

OpenID Connect to their existing applications. Then I plan to publish a standalone version with an open-source license within a timeframe of 3-6 months. Notice that I work on this in my free time which makes the delivery duration longer. The point would be to have an easy way to install the server providing binaries, a docker image, and further tooling for administration. Last would be to provide a Software as a Service helping organizations to have a full-featured IAM solution with no infrastructure to manage. I would also work in parallel on bringing Self-Sovereign Identity capabilities to the product.

Stipend Amount (USD) : 1500
