

EEF Meeting Minutes, Thursday August 31, 2023

Erlang Ecosystem Foundation, Minutes of a Regular Meeting of the Board of Directors
Meeting #86, August 31, 2023

A regular meeting of the Erlang Ecosystem Foundation was held over group conference call (Zoom). The meeting began at 16:03 UTC.

Attendance

The following members of the board of directors were present (10/11): Francesco Cesarini, Maxim Fedorov, Amos King, Kenneth Lundin, Ben Marx, Bryan Paxton (joined 11 minutes past the hour), Miriam Pena Villanueva (joined 13 minutes past the hour), Peer Stritzinger, Sebastian Strollo, and Alistair Woodman.

The following members of the board of directors were absent: Sophie DeBenedetto.

Agenda Items

1. Approval of minutes from previous meetings.

RESOLVED, that the Erlang Ecosystem Foundation approve the minutes as presented as representing a true and accurate record of the board meeting #85 held on August 3, 2023. Unanimously approved.

2. Intermediate actions and activities: none
3. Treasury and Membership update: Sebastian is working on the cybergrants.com application. Membership update (changes since last meeting): Annual supporting: 147 (unchanged), Basic 1346 (+20), Lifetime supporting: 19 (unchanged), Managing and Contributing: 18 (unchanged). Total: 1538 (+20).
4. Unanimous consent votes: none scheduled.
5. Stipends:
 1. OpenID Connect Client stipend request from Jonatan Männchen for \$15,600 + OpenID Foundation membership (and certification) \$900/year. The sherpa of the proposal is Peer, and the security working group is in favor. Included in the proposal is also that EEF as an organization joins the OpenID Foundation (as well as apply for certification of the client). Peer presented the proposal, and answered questions. There seems to be a general interest in having a working

oidc client, thus it seems like high probability that maintenance will be picked up by the community.

RESOLVED, that the Erlang Ecosystem Foundation approve the stipend request from Jonatan Männchen for \$15,600 and the annual OpenID Foundation membership and certification at \$900/year. Unanimously approved.

2. SpawnFest 2023 sponsorship at the Platinum level, for \$3,000 (to be handed out as prize money in the form of Amazon gift cards). Bryan presented the proposal, SpawnFest is a very popular event and a good place for EEF to be seen.

RESOLVED, that the Erlang Ecosystem Foundation approve the sponsorship of SpawnFest at the platinum level with \$3,000 in prize money. Unanimously approved.

6. Any other topics:

7. Alistair declared the meeting adjourned at 16:30 UTC.

Dated August 31, 2023

Secretary of the meeting: _____ Sebastian Strollo

Attachments:

1. OpenID Connect Client stipend request (5 pages)
2. SpawnFest 2023 sponsorship proposal (3 pages)

OpenID Connect Client Stipend

Work Group: Security

Contact: Jonatan Männchen

Combined Costs: 900\$ per Year & 15,600\$ Once

Purpose

OpenID Connect 1.0 is a simple identity layer on top of the OAuth 2.0 protocol. It allows Clients to verify the identity of the End-User based on the authentication performed by an Authorization Server, as well as to obtain basic profile information about the End-User in an interoperable and REST-like manner. [<https://openid.net/connect/>]

OpenID allows to delegate authentication and authorization to an OpenID server. Examples for providers / projects offering OpenID are: [Google](#), [Yahoo](#), [Apple](#), [Azure Active Directory](#), [Auth0](#), [Okta](#), [Keycloak](#), [Zitadel](#) and many more.

Having a set of contemporary, secure and well maintained components implementing the OpenID Connect standard for the Erlang/Elixir ecosystem makes a lot of sense since OpenID Connect has become the de facto standard for Single Sign On / Delegated Authentication in the industry.

Intended product of the project

Overview

This project will build on top of the existing [oidcc](#) library. I've recently taken over maintenance from [indigo-dc](#) which was unfortunately unable to further maintain the library.

The goal is to clean up, refactor and update the library to conform with all the latest specifications. The code is currently largely untested and its conformance certification no longer works.

Subprojects

oidcc - *Erlang*

This is the main library. It contains modules with basic data structures and functions to handle all actions/validations. It will also contain a `gen_server` to keep an up-to-date OpenID introspection as well as keys in memory.

oidcc_plug - *Elixir*

Contains helpers to integrate both APIs (Token in Authorization Header) as well as session based interaction into [plug](#).

oidcc_cowboy - *Erlang*

Contains helpers to integrate both APIs (Token in Authorization Header) as well as session based interaction into [cowboy](#).

phx_gen_oidcc - *Elixir*

Contains Phoenix Generator to set up a Phoenix application with OIDC.

Requirements

1. Good Test Coverage
2. Good Code Quality
3. Conforms to the following [OpenID Relying Party Conformance Profiles](#)
 - a. Basic Relying Party
 - b. Relying Party Using Configuration Information
 - c. Form Post Relying Party
4. Conforms to the following RFCs
 - a. [RFC7636](#) - Proof Key for Code Exchange by OAuth Public Clients
 - b. [RFC7523](#) - JSON Web Token (JWT) Profile for OAuth 2.0 Client
5. Secure Defaults
 - a. Shipped with a secure and complete TLS setup
 - b. Can be overridden with custom TLS settings
 - c. JWT Settings are automatically set up to the most strict settings according to the OIDC Config Introspection
6. GitHub Actions Setup that runs
 - a. Unit Tests
 - b. Conformance Tests
 - i. If tests can not be automated sufficiently, detailed instructions on how to run them manually will be included.
 - c. Linter
 - d. Dialyzer
7. All libraries are well documented on Hex via [rebar3_ex_doc](#)
 - a. public functions have dialyzer specs
 - b. public functions have examples

- c. all libraries contain setup instructions
- d. all libraries contains examples for most common use cases
- 8. oidcc Configuration Processes provide an elixir compatible child_spec so that they can be started easily
- 9. Compatible with latest stable OTP / Elixir releases at time of publication

Non-technological goals

- Build a clean and well documented code base
- Make it easy for outside developers to contribute to the project
- Find some people willing to help maintaining the projects

Runtime Dependencies

- [erljwt](#) *will be replaced and the library itself deprecated*
- [jose](#) - JWT Token handling - MIT license
- [hackney](#) - HTTP(S) client - Apache 2.0 License
- [telemetry](#) - Metrics / Instrumentation - Apache 2.0 License
- [cowboy](#) (Only oidcc_cowboy) - HTTP Server - ISC License
- [plug](#) (Only oidcc_plug) - Compose HTTP Workflow - Apache 2.0 License
- [phoenix](#) (Only phx_gen_oidcc) - Web Framework - MIT License

Future Plans (not part of this stipend)

- Support further OpenID Conformance Profiles
- Support further OpenID / OAuth related RFCs

Maintenance

The stipend includes guaranteed maintenance of the libraries (reviewing PR's / Issues / Bug Fixes) for at least one year. It is the primary goal however, to build a core maintainer team that can maintain / improve the library following a regular process as is customary for open source projects.

Development Plan

Task	Time Frame Start	Time Frame End	Person Days work
Setup CI - oidcc	W1	W1	2
Cleanup and Refactor current modules	W1	W2	4
Replace erljwt with jose	W3	W3	1
Implement telemetry instrumentation	W3	W3	1
Certify Library	W4	W4	3
Write Documentation	W5	W5	2
Implement Cowboy Integration	W5	W6	3
Implement Plug Integration	W7	W7	2
Implement phx_gen_oidcc	W8	W8	3
Publication	W9	W9	1
Conference Talk	-	-	2
1st Year Maintenance / Hardening	-	-	4

Dissemination

A talk will be prepared to be able to introduce the library to all interested developers on the BEAM. The talk will be held at at least one BEAM related conference.

An effort will be made to integrate phx_gen_oidc directly with phoenix similar to [phx_gen_auth](#).

Delivery

The libraries will be published on GitHub in its own organization. (licensed under the Apache 2.0 License, same as OTP and most dependencies) A stable release will be published on Hex.pm.

Costs

1. Certification

- a. 200.00 USD / Year for Non-Profit Organization Level membership of the Erlang Ecosystem Foundation in the OpenID Foundation (reduces fees for certification costs significantly) - <https://openid.net/foundation/>
- b. 700.00 USD / Year for Certification- <https://openid.net/certification/fees/>

2. Development

- a. 1,200\$ - Setup CI - oidcc
- b. 2,400\$ - Cleanup and Refactor current modules
- c. 600\$ - Replace erljwt with jose
- d. 600\$ - Implement telemetry instrumentation
- e. 1,800\$ - Certify Library
- f. 1,200\$ - Write Documentation
- g. 1,800\$ - Implement Cowboy Integration
- h. 1,200\$ - Implement Plug Integration
- i. 1,800\$ - Implement phx_gen_oidcc
- j. 600\$ - Publication
- k. free - Conference Talk
- l. 2,400\$ - 1st Year Maintenance / Hardening

Payment

- Recurring Costs - Directly to OpenID Foundation
- Development
 - Wire Transfer
 - Recipient: Jonatan Männchen
 - 
 - 
 - 
 - Payments done for completed tasks on request, no more than 4 installments

SpawnFest 2023 sponsorship proposal

What?

SpawnFest is an annual 48 hour online software development contest in which teams from around the world get exactly one weekend to create the best BEAM-based applications they can. The ideals behind SpawnFest are fun, learning, networking, and helping to connect sponsors and players for jobs. In addition, long term projects can fall out of this, which is excellent for the ecosystem. An example of one such project is `erlang_ls`, The Erlang Language Server.

The intention behind this proposal is to gain sponsorship by the EEF for SpawnFest as a platinum sponsor.

Platinum sponsorship in the form of 3000 USD worth of Amazon gift card(s). At least 1500 is up for grabs by winning players. It is up to designated team drivers how to divide this up within a team and not the Foundation's burden. Furthermore, it is up to the competition organizers to divide the prize between teams (and then teams within themselves) and also not the Foundation's burden.

SpawnFest would add EEF logo(s) to the site and market EEFs sponsorship through various social channels.

Who?

SpawnFest is being driven this year by the following organizers.

- Bryan Paxton
 - HCA
 - EEF Board Member
 - Annual EEF supporting member
 - Ran SpawnFest 2021
- Paulo F. Oliveira
 - Kivra AB
 - Active contributor to EEF software projects
 - Annual EEF supporting member
 - Ran SpawnFest 2021 and SpawnFest 2022

Why?

From all my experiences within the BEAM community, everyone looks forward to SpawnFest, as players or onlookers. Last year was the biggest turn out ever in the history of the event and the organizers are aiming for an even bigger turn out this year. In order to achieve a bigger turn out we believe more sponsors and more prizes is the way to go.

EEF being a platinum sponsor, and perhaps what will be the biggest sponsor is no small thing. SpawnFest would indeed make a lot of noise about this; as can the EEF itself.

It's in line with EEF goals. Namely, connect companies with engineers, especially less experienced and / or newer engineers. Further, a job fair for sponsors and players prior to the event is on the organizer's agenda. Said job fair is a Toucan event a few days before the competition. Last year this was hands down a huge success and further drove up our membership numbers.

How?

Head on over to <https://spawnfest.org/> go to the sponsors section and click the form link or just go here: <http://sponsor.spawnfest.com>

When?

The event will be held Oct 15th and 16th (approximately 2.5 months from now). This gives the organizers plenty of time to come up with new ideas on how to promote the event and its

sponsors. Further, how to get more players and project ideas to come to fruition. Specifically, we want to see projects that sustain or at least can be picked up by others after the event.

Where?

The event is held online and globally available.
